

Clinical Protocol

Protocol Title	Study of CLN-201 in inflammatory condition maybe final
Protocol Number	CLN-201-2026-01 / CLN-201-2026-07
Investigational Product	CLN-201
Sponsor	NovaCura Biotech or NovaCura Bio
Phase	Phase II or III
Date	2026-05-10 maybe updated 2026-05-16
Version	draft / final pending

1. Protocol Summary

This protocol describes a study of CLN-201 in inflammatory disease. The study is designed to assess if the drug works and is safe.

Item	Description
Design	Randomized, blind placebo study, maybe open-label at some sites.
Population	Adults 18 to 70 or 75 years old.
Sample Size	100 or 120 patients depending on enrollment feasibility.
Treatment	CLN-201 10 mg once daily, possibly twice daily if not responding.
Control	Placebo / comparator not finalized.
Duration	10 weeks treatment, or 12 weeks, with follow-up 2 weeks maybe 4.
Primary Endpoint	Change in score at Week 8, maybe Week 12 if available.

2. Introduction

CLN-201 may help inflammatory disease symptoms. More details will be added later.

3. Objectives and Endpoints

- Primary objective: improve symptoms
- Secondary objectives: safety, labs, quality of life, biomarkers, other outcomes

The main endpoint is disease improvement using a score that will be defined elsewhere.

4. Study Design

This is a multicenter study with blinded procedures where possible. Some study sites may use open-label operations due to logistics.

Participants may be randomized 1:1, although alternative allocation may be used if needed.

5. Study Population

5.1 Inclusion Criteria

- Adults with inflammatory disease
- Stable medications maybe 4 weeks
- Can sign consent

5.2 Exclusion Criteria

- Infection
- Pregnant
- Heart issue
- Other exclusions to be added

6. Treatment of Participants

Participants will receive CLN-201. Placebo or active comparator may be used depending on final regional strategy.

Dose may increase if participants do not respond.

7. Study Assessments and Procedures

Visits include screening, Week 1, Week 2, Week 4, Week 8, and end. Week 12 may also be used for endpoint collection.

Assessment	Screening	Baseline	Week 1	Week 2	Week 4	Week 8	Week 12	End
Informed consent	X							
Eligibility review	X	X						

Randomization		X					X	
Drug dispensing		X	X	X	X	X	X	X
Primary endpoint						X	X	

8. Adverse Event Reporting

Adverse events and serious adverse events will be collected. Reporting timelines will follow standard practice.

9. Statistics

Statistical methods will be standard. Sample size justification is not completed yet. Missing data handling will be described in the SAP if prepared.

10. Ethics and Regulatory Considerations

The study will follow GCP and ethics requirements where applicable. Consent should be obtained before most study procedures.

11. Data Handling and Recordkeeping

Data will be recorded and stored appropriately.

12. Appendices

- Schedule of activities (draft)
- Safety guidance (not attached)
- Pregnancy guidance (to be added)

This document is intentionally invalid for negative testing. It retains the medicine name CLN-201 but includes ambiguity, inconsistent metadata, incomplete ICH M11 structure, unresolved design details, and missing operational/statistical content.
